

**Codebook for Partisan Presidential Influence over U.S. Federal Budgetary Outcomes:
Evidence from a Stochastic Decomposition of Executive Budget Proposal**
(George A. Krause and Ian Palmer Cook)

This codebook describes all the variables used in the manuscript “*Partisan Presidential Influence over U.S. Federal Budgetary Outcomes: Evidence from a Stochastic Decomposition of Executive Budget Proposals*”. They are presented in the order they appear in the Stata-12 format data file included with the replication materials. Summary information about each variable is presented, along with the sources of the data. Data that were derived from variables are noted as “author-created”.

<i>Variable Name:</i>	<i>Label Name (if any):</i>
actualyear	Actual Year

```

type: numeric (int)

range: [1959,2008]          units: 1
unique values: 50          missing .: 0/1600

mean: 1983.5
std. dev: 14.4354

percentiles:      10%      25%      50%      75%      90%
                  1963.5   1971    1983.5   1996    2003.5

```

Description: Integer variable indicating a calendar year.

Source: Author-created

fiscalyear	Fiscal Year
------------	-------------

```

type: numeric yearly date (int)

range: [1960,2009]          units: 1
or equivalently: [1960,2009] units: years
unique values: 50          missing .: 0/1600

mean: 1984.5 = 1984 (+ 3 months)
std. dev: 14.4354

percentiles:      10%      25%      50%      75%      90%
                  1964.5   1972    1984.5   1997    2004.5
                  1964     1972    1984     1997    2004

```

Description: Integer variable indicating the fiscal year, as used by the federal government for budgeting and financial activities. Note that in 1976 the government switched to the current fiscal year model used in business. Budget data routinely includes a data point for the 1976 “Transitional Year” appropriations, denoted with the suffix “TY” in the data series.

Source: Author-created

agencycode AgencyCode

type: numeric (byte)
range: [1,33] units: 1
unique values: 32 missing .: 0/1600
mean: 16.875
std. dev: 9.64586
percentiles: 10% 25% 50% 75% 90%
4 8.5 16.5 25.5 30

Description: This is a unique identifier for each agency in the data set. Note that the numbering implies no substantive ordering.

Source: Author-created.

departmentagencyname Department/Agency Name

type: string (str45)
unique values: 32 missing "": 0/1600
examples: "Department of Health and Human Services"
"Department of Veterans Affairs"
"Federal Emergency Management Agency"
"Nuclear Regulatory Commission"
warning: variable has embedded blanks

Description: This is the name of the relevant agency or department.

Source: Authors selected a list of federal agencies according to the criteria noted in the manuscript. The official names are drawn from federal budget documents.

appropriated Appropriated

type: numeric (double)
range: [-1.937e+09,1.170e+12] units: 1
unique values: 1336 missing .: 184/1600
mean: 3.3e+10
std. dev: 9.6e+10
percentiles: 10% 25% 50% 75% 90%
2.0e+07 6.4e+07 2.5e+09 1.8e+10 6.6e+10

Description: This is the amount of money, in then-year dollars, appropriated to the department or agency by Congress, for a given fiscal year.

Source: The *Budget of the United States Government (various years)*, published by the Office of Management and Budget. Note that each publication year of the budget contains the appropriated funds for the year immediately prior, as well as two or three more years prior. The amount appropriated for a given fiscal year is subject to change through the year. To obtain the most accurate and complete ‘finalized’ numbers, the level of appropriations’ was taken as follows: in each budget publication for year *i*, register the value of appropriated funds for that department or agency at *i-2*. For example, referring to the 2003 budget publications entry for the Department of Veterans Affairs, the entry for the 2001 level of appropriations becomes the data point for the variable “appropriated” for Department of Veterans Affairs in 2001 in our data set.

congappropdef (unlabeled)

```

type: numeric (double)

range: [-7.047e+09,1.080e+12]      units: 1
unique values: 1386                missing .: 194/1600

mean: 4.6e+10
std. dev: 1.1e+11

percentiles:      10%      25%      50%      75%      90%
                  4.3e+07  1.2e+08  5.1e+09  3.3e+10  8.7e+10
  
```

Description This is the deflated version of the “appropriated” variable. Deflation converts the current dollar amounts to 2005 constant dollars to allow for direct comparison.

Source: Deflators are taken from the *U.S. Office of Management and Budget’s Historical Tables* (Table 10.1), provided with the yearly budget publication.

defappreqgap (unlabeled)

```

type: numeric (double)

range: [-6.734e+11,7.497e+11]    units: 1
unique values: 1374              missing .: 183/1600

mean: -1.5e+09
std. dev: 5.7e+10

percentiles:      10%      25%      50%      75%      90%
                  -2.7e+09 -1.8e+07  5.2e+06  1.2e+09  8.5e+09
  
```

Description: This variable measures the gap between the presidential budget request and the amount Congress appropriates for a specific agency or department, in a given fiscal year. This gap is deflated, with the base year being 2005.

Source: Author-created gap. Deflators are taken from the *U.S. Office of Management and Budget’s Historical Tables* (Table 10.1), provided with the yearly budget publication.

one_supplemental (unlabeled)

```

type: numeric (byte)
  
```

range: [0,1] units: 1
unique values: 2 missing .: 0/1600

tabulation: Freq. Value
1308 0
292 1

Description: This is a binary variable indicating whether or not a department or agency received supplemental funding in a given fiscal year. If a single supplemental funding was noted in the budget exhibits, this variable was coded as 1, otherwise as 0.

Source: *Budget of the United States Government (Historical Tables): Fiscal Years 1960–2009.* Office of Management and Budget Washington, D.C.: General Printing Office.

two_supplementals (unlabeled)

type: numeric (byte)

range: [0,1] units: 1
unique values: 2 missing .: 0/1600

tabulation: Freq. Value
1564 0
36 1

Description: This is a binary variable indicating whether or not a department or agency received a second supplemental funding amount in a given fiscal year. If a second supplemental funding was noted in the budget exhibits, this variable was coded as 1, 0 otherwise.

Source: *Budget of the United States Government (Historical Tables): Fiscal Years 1960–2009.* Office of Management and Budget Washington, D.C.: General Printing Office.

subcom (unlabeled)

type: string (str17)

unique values: 14 missing "": 0/1600

examples: "com_state_justice"
"fin_serv"
"independent"
"labor"

Description: This variable indicates Congressional subcommittees.

Source: *Budget of the United States Government (Historical Tables): Fiscal Years 1960–2009.* Office of Management and Budget Washington, D.C.: General Printing Office.

yrs_hr_chair_exp (unlabeled)

type: numeric (byte)

```

    range: [1,21]
unique values: 21
    units: 1
missing .: 71/1600

    mean: 5.45258
    std. dev: 4.29315

percentiles:    10%    25%    50%    75%    90%
                1      2      4      8     12

```

Description: This variable indicates the number of years the chair of the relevant subcommittee (with jurisdiction over the agency or department and its operations) has been the chair.

Source: Derived from data on Congressional committee and subcommittee membership generously provided by Jonathan Woon, the University of Pittsburgh. Original source citation: Charles Stewart III and Jonathan Woon. Congressional Committee Assignments, 103rd to 112th Congresses, 1993--2011

presparty (unlabeled)

```

Description: The variables with a suffix of “ai” capture the coding resulting from altering the legislative partisan seat share (% Democratic Seats & % Democratic Senate seats), as well as the individual characteristics of Appropriations subcommittee chairmen charged with initially vetting executive budget proposals (Appropriations Subcommittee Chairman Experience & Appropriations Subcommittee Chairman Ideology), so that they assess the extent to which they are ideologically synchronous with the ideological orientation of the agency in question. Ideological synchronicity is operationalized as follows: the subcommittee chairman’s partisan affiliation and agency ideology are compatible (i.e., Democratic chair and liberal agency; Republican chair and conservative agency) are coded as + 1; incompatible (i.e., Democratic chair and conservative agency; Republican chair and liberal agency) are coded as -1; and moderate agencies (irrespective of the chairman’s partisan affiliation) are coded as 0.

partymod (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
1388 0
212 1

Description: This binary variable captures an interaction between the president's party and moderate agencies. The variable is coded 1 if the president's party is Democrat and the agency is ideologically moderate, 0 otherwise.

Source: Interaction of author-created variable and **modagency**.

partylib (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
1460 0
140 1

Description: This binary variable captures an interaction between the president's party and moderate agencies. The variable is coded 1 if the president's party is Democrat and the agency is ideologically liberal, 0 otherwise.

Source: Interaction of author-created variable and **libagency**.

budget74amends (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
 512 0
 1088 1

Description: This binary variable is coded 1 for years following the 1974 Budget Impoundment Act, 0 otherwise.

Source: Author-created. Argument for inclusion comes from Schick (1980).

any_supp (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
 1308 0
 292 1

Description: This binary variable is coded 1 if the agency or department received any (either one or two) supplemental funding in a given year based on **one_supplemental** and **two_supplementals**.

Source: Author-created.

appgrowth (unlabeled)

type: numeric (float)
range: [-683.33386,715.79413] units: 1.000e-10
unique values: 1339 missing .: 257/1600
mean: 4.05599
std. dev: 55.4385
percentiles: 10% 25% 50% 75% 90%
 -15.551 -3.42339 2.19066 9.68436 28.5532

Description: This variable captures the amount of year-on-year growth in appropriated funds for an agency or department, which is defined as $a_{it} = [\ln(A_{it}) - \ln(A_{it-1})] \times 100$.

Source: Author-created based on **congapproprdef**.

fiscalyear_old fiscalyear

type: numeric (int)
range: [1960,2009] units: 1
unique values: 50 missing .: 0/1600
mean: 1984.5
std. dev: 14.4354
percentiles: 10% 25% 50% 75% 90%
1964.5 1972 1984.5 1997 2004.5

Description: This variable is the same as **fiscalyear**, reiterated for purposes of visual comparison inspection of other variables.

Source: Author-created.

cpartmajchange2 (unlabeled)

type: numeric (float)
range: [-2,2] units: 1
unique values: 5 missing .: 0/1600
tabulation: Freq. Value
32 -2
64 -1
1408 0
64 1
32 2

Description: This variable same as **cpartmajchange**, just reiterated for purposes of visual comparison inspection of the **cpartmajchangecorrected** computed that take into account the ideological leanings of the agency. See the description for **cpartmajchangecorrected** (see below and page 16 of manuscript).

Source: Author-created.

cpartmajchangecorrected (unlabeled)

type: numeric (byte)
range: [-2,2] units: 1
unique values: 5 missing .: 0/1600
tabulation: Freq. Value
21 -2
42 -1
1474 0
42 1
21 2

Description: This variable captures a different coding of change of majority parties that takes into account the ideological leaning of the agency based on the 95% Bayesian posterior credibility interval classification. See page 16 in the manuscript for further details on the coding.

Source: Author-created.

presidentsrequest2 (unlabeled)

type: numeric (float)
range: [-2.582e+09,7.330e+11] units: 1
unique values: 1280 missing .: 201/1600
mean: 3.5e+10
std. dev: 9.8e+10
percentiles: 10% 25% 50% 75% 90%
 2.0e+07 6.8e+07 2.5e+09 1.9e+10 6.8e+10

Description: This variable is same as **presidentrequest**.

Source: Author-created.

presidentrequestdef2 (unlabeled)

type: numeric (float)
range: [-7.933e+09,7.570e+11] units: 1
unique values: 1331 missing .: 252/1600
mean: 4.9e+10
std. dev: 1.2e+11
percentiles: 10% 25% 50% 75% 90%
 4.5e+07 1.3e+08 5.4e+09 3.3e+10 8.4e+10

Description: This variable is same as **presidentrequestdef**, reiterated for purposes of visual comparison inspection of other variables.

Source: Author-created.

presidentrequestdef2csi (unlabeled)

type: numeric (float)
range: [-7.933e+09,7.570e+11] units: 1
unique values: 1352 missing .: 231/1600
mean: 4.8e+10
std. dev: 1.2e+11
percentiles: 10% 25% 50% 75% 90%

4.3e+07 1.3e+08 5.2e+09 3.3e+10 8.3e+10

Description: This variable is same as **presidentrequestdef2**, adding the handful of “*csi**” generated cases in those cells where the executive request was missing (See *Note 9* in the manuscript for more details).

Source: Author-created.

csi* (unlabeled)

Description: There are a series of variables prefixed by “*csi*” followed by an agency or department name. These variables are the derived values for the agency or department, and include a cubic-spline interpolation value for any missing data. (See *Note 9* in the manuscript.)

Source: Author-created.

presrequestclean (unlabeled)

type: numeric (float)
range: [2197241,7.570e+11] units: 1
unique values: 1334 missing .: 249/1600
mean: 4.9e+10
std. dev: 1.2e+11
percentiles: 10% 25% 50% 75% 90%
4.9e+07 1.4e+08 5.5e+09 3.3e+10 8.4e+10

Description: This variable is the same as **presidentrequestdef2csi** & **presidentrequestdef2**, except that it omits a handful of negative presidential budget request values to be used in subsequent computation of the “*prgrowth*” measures used in both the EIP “first-stage” regression models and later for the appropriations growth presidential budgetary influence models

Source: Author-created.

prgrowth (unlabeled)

type: numeric (float)
range: [-408.80325,425.99527] units: 1.000e-10
unique values: 1310 missing .: 282/1600
mean: 3.06519
std. dev: 49.9463
percentiles: 10% 25% 50% 75% 90%
-14.3543 -3.49881 2.19795 9.29269 23.0989

Description: This variable is the annual growth rate in executive budget proposals formally submitted to the legislature – i.e., $r_t = [\ln(R_t) - \ln(R_{t-1})] \times 100$.

Source: Author-created based on **presrequestclean**.

lagbudgetgap (unlabeled)

type: numeric (float)
range: [-1043.2395,397.4025] units: 1.000e-14
unique values: 1296 missing .: 296/1600
mean: 5.68465
std. dev: 60.584
percentiles: 10% 25% 50% 75% 90%
-14.308 -3.23747 2.15822 10.2886 31.389

Description: This variable is the logged percentage difference between Appropriations and Executive Budget Proposals in the preceding fiscal year $t-1$ for agency i .

Source: Author-created.

unifiedpartygovt (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
992 0
608 1

Description: This binary variable is coded 1 if the party of the president is the same as one of either the House of Representatives or the Senate, 0 otherwise.

Source: Author-created.

fy1960-fy2009 (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
1568 0
32 1

Description: A series of binary variables indicating fiscal year. Coded as 1 for that observation being in the fiscal year denoted by the variable name, 0 otherwise.

Source: Author-created.

asymmetric (unlabeled)

type: numeric (float)
range: [0,1] units: 1
unique values: 2 missing .: 0/1600
tabulation: Freq. Value
 598 0
 1002 1

Description: This is a binary variable indicating if the preferences exhibit asymmetry (= 1 if observed executive budget request for agency *i* in year *t* does not exceed corresponding congressional appropriations, = 0 otherwise)

Source: Author-created.

lagbudgetgap2 (unlabeled)

type: numeric (float)
range: [-1043.2395,397.4025] units: 1.000e-14
unique values: 1292 missing .: 300/1600
mean: 5.48527
std. dev: 60.4151
percentiles: 10% 25% 50% 75% 90%
 -14.334 -3.23747 2.1167 10.2115 31.0941

Description: This variable is the same as **lagbudgetgap**, merely reiterated for purposes of visual comparison inspection of other variables.

Source: Author-created.
